

DORĐE MARKOVIĆ

Full Stack & AI Engineer

djmarkovic999@gmail.com | djmarkovic.com | github.com/djolex999 | virwiki.dev

Full-stack and AI engineer building React, TypeScript and Node.js products, with multi-vendor LLM features (Anthropic, OpenAI, Gemini) in production and eval harnesses deciding which model runs. Build with Claude Code daily (sub-agents, skills, hooks, cross-model review, a pre-ship audit gate) and published Vir, an open-source MCP server for coding agents. Own delivery end to end: API and data design, frontend, LLM integration, payments, testing and deployment.

TECHNICAL SKILLS

AI engineering: Claude Code (sub-agents, skills, hooks, MCP servers, CLAUDE.md), Anthropic API (tool use, structured outputs, streaming), OpenAI Responses API, Gemini, Whisper, vision models, multi-vendor routing with quality gates and failover, LLM evals (LLM-as-judge, confidence intervals), prompt-injection hardening

Frontend: React, TypeScript, Next.js, Vite, MUI, Tailwind, offline-first PWAs (IndexedDB)

Backend & data: Node.js, Express, Python, MongoDB (Mongoose, transactions), PostgreSQL/Supabase (RLS, SQL functions, pg_cron), SQLite, Zod, SSE streaming, JWT refresh rotation and revocation, OAuth

Payments: OTP Bank card gateway (HMAC, signed XML API, settlement ledger, reconciliation), PayPal (transactional capture), Paddle (webhooks)

Testing & delivery: node:test, Vitest, Playwright, pytest, GitHub Actions, Vercel, Render, Cloudflare, npm publishing

EXPERIENCE

Full Stack Engineer · GrowthQ Lab DOO (co-founded software studio) Aug 2025 - Present

- Build and run SaaS products end to end: architecture, frontend, backend, AI integrations, billing, testing and production delivery.
- Designed the agentic workflow behind every product: two-layer CLAUDE.md (global plus per-project), custom Claude Code skills, hooks and slash commands, a pre-ship audit skill used as a release gate, and session distillation into a searchable knowledge base (Vir).
- Run builds with parallel sub-agents and cross-model review: Sonnet implements, Opus takes the hard parts, and a stronger model reviews their output before merge, so no agent grades its own work.
- Hardened AI features for production: per-user rate limiting that fails closed, per-document LLM cost tracking with fallback-rate alerts, shared Zod contracts, token revocation and OAuth state nonce.
- Built an offline-first asset-inventory PWA for a government client: QR scanning, append-only scan log with pure reconciliation, IndexedDB backups; 27 security-review findings fixed; 175 tests.

Internship Trainee · Reputeo Feb 2024 - Mar 2024

- Built web crawlers and data extraction workflows with Python and Scrapy.

Back End Developer Intern · ReservEat Mar 2023 - Jun 2023

- Developed backend functionality with Node.js, Express, TypeScript and MongoDB in a Scrum team.

Earlier (2019-2022): Web Development Trainer (Cactus Education, Peer Educators Network); Back End Intern, 10minutendeutsch; IT Support.

SELECTED PROJECTS

Pripremi.rs · AI SaaS for Serbian teachers 2026 - Present

- Built and run solo (AI-assisted) a lesson-plan generator that turns a short brief into a Word-ready preparation in about 2 minutes; live at pripremi.rs.
- Multi-vendor LLM orchestrator (OpenAI + Gemini) with a runtime quality gate, vendor failover and per-document cost tracking. Models chosen by an in-house eval harness (four vendors, LLM-as-judge calibrated with planted defects, Wilson intervals), switched on cost per valid document.
- OTP Bank card payments: HMAC-SHA256 MAC pinned to spec vectors, signed redirect and XML API with fail-unknown handling, a payment ledger with exactly-once settlement and a 15-minute reconciliation job. 1,600+ hand-written tests (node:test, Playwright, Vitest).

Vir · Open-source knowledge layer for coding agents 2026 - Present

- TypeScript CLI that distills Claude Code and Codex sessions into a searchable knowledge base, served back to agents over MCP. Listed on awesome-claude-code; Obsidian plugin in the community directory.
- Two-model pipeline (Haiku classifies, Sonnet distills) behind free heuristic filters; agent-CLI calls run sandboxed because transcripts are untrusted input. Eval harness with paired-bootstrap confidence intervals. 1,300+ tests, 60+ npm releases, ~24k lines; MIT. virwiki.dev · npm: @djolex999/vir-cli

GrowthQ · AI brand content engine 2025 - Present

- Turns brand profiles into branded social content: React/Vite, Express, TypeScript, MongoDB in a pnpm monorepo with shared Zod contracts; OpenAI (GPT, vision, Whisper) and Kie.ai generation, atomic credits with refunds on every failure path, PayPal capture inside a MongoDB transaction; 550+ tests. US-market version (USD plans, local calendar) in development. growthq.rs

EDUCATION

BSc Computer Science · Faculty of Natural Sciences, North Mitrovica · 2019-2026 October 2026

Thesis: "User Experience 3.0: Applying Artificial Intelligence on Web Platforms".

ADDITIONAL

Mentorship: Mentor the Young mentee; mentored by Vukota Pekovic, Cisco Silicon One.

Awards: Launcher.rs winner (2025); Arduino Makers League, IT Camp Serbia, 2nd place (2024). **Languages:** Serbian (native), English (professional).
